

Niraj Mahale

Ahmedabad, India | Open to relocation: Pune

nirajmahale2002@gmail.com

linkedin.com/in/nirajmahale | github.com/TheNirajMahale

Software engineer with hands-on experience in Flutter and Node.js, and backend experience in Spring Boot. Comfortable working on the full system, from mobile UI to APIs and databases.

Education

Dr. D. Y. Patil Institute of Management and Research, Pune 2023 – 2025
Master of Computer Applications (MCA) CGPA: 7.61 / 10.0

Kavayitri Bahinabai Chaudhari North Maharashtra University, Jalgaon 2020 – 2023
Bachelor of Computer Applications (BCA) CGPA: 9.5 / 10.0

Experience

Software Engineer May 2026 – Present
Velastra Pvt. Ltd., Ahmedabad

- Took over a startup's early-stage mobile app and backend, both built with no dedicated engineer and little structure, and rebuilt both from the ground up.
- Replaced a WebView wrapping a static web dashboard with a fully native Flutter app — provider-driven state management, live GPS map tracking, analytics charts, and a custom point-to-route deviation detection engine built from vector math.
- Rebuilt the Node.js/Express backend, replacing hardcoded, unstructured logic with a clean REST API split across MongoDB and MySQL. Used MongoDB for sensor telemetry since sensors don't always send every field — a fixed SQL schema would create many empty (null) values, wasting space and slowing queries — and kept MySQL for structured business data.
- Added a WebSocket layer (Socket.io) end-to-end — backend broadcasts live updates, Flutter dashboards consume them in real time, removing the need for manual refreshes.
- Implemented JWT authentication, request validation, and rate limiting across the API.
- Chose which parts of the old system needed fixing right away and which could wait, based on the founder's priorities for stability.

Projects

LoreKeeper API — Personal Reading Tracker Backend [GitHub](#)

- Built a Spring Boot REST API for a personal reading tracker covering books, manga, and comics, following a clean 4-layer architecture (Entity -> DTO -> Repository -> Controller).
- Implemented stateless JWT authentication with Email/Password login as well as Google OAuth sign-in.
- Integrated the Open Library API to auto-fetch book metadata, page counts, and cover art.
- Used PostgreSQL for persistence, with Jakarta Validation and a centralized global exception handler for strict data integrity.
- Added Runeglass, a rule-based adaptive reading-assistance highlighter module built into the API.

Lorebound — Offline EPUB Reader (Flutter) [GitHub](#)

- Building an offline-first EPUB reader in Flutter with a custom, fully native render engine (no WebViews) for direct control over performance and typography.
- Implemented dual reading modes – paginated and infinite vertical scroll – with an immersive, distraction-free overlay UI.

- Designed local library management (importing EPUBs, tracking reading progress) as a standalone offline app, built to later serve as the mobile front-end for the LoreKeeper API.

Skills

Programming Languages: Java, Dart, JavaScript, SQL

Frameworks & Libraries: Flutter, Spring Boot, Node.js, Express

Databases: MongoDB, MySQL, PostgreSQL

Web Development: HTML, CSS, REST APIs, JWT / OAuth

Cloud & Tools: Git, VS Code, Linux, Postman, Eclipse, Docker, Google Cloud Platform (GCP)

Concepts: Data Structures & Algorithms (DSA), Software Development Life Cycle (SDLC)

Languages Spoken: English, Hindi, Marathi
